

# STAND UP BUCKET

Stand Up Buckets (also known as Mini Skid Steer Buckets) are designed to bring the same high-quality performance of a full-size bucket to walk behind skid steers. Small Machine Buckets feature a reinforced construction with added strength at the bucket radius and added support at the bucket heel. Four additional skid plates are located on the bottom of the bucket, as well as two on the side, to protect against hard materials.

#### Strong and Functional

Reinforced bucket radius adds strength and makes clean out simple.

#### Back Drag Away

Square reinforced heel provides additional support. Great for back dragging.

#### Optional Teeth Available

A wide variety of teeth are available.

## MULCH BUCKET

When you need a bucket to move mulch, snow, wood shavings, gravel and other light materials, Arrow's mulch bucket is an excellent choice. The bucket's unique design allows for easy removal of material. The window gives the operator increased visibility. The inside of the bucket is fully welded for added strength and to prevent rusting in the seams.

## TELEHANDLER BUCKET

The Arrow Telehandler Bucket is an industry favorite for telehandler operators. Side and bottom skid plates help resist wear, extending the bucket's lifespan. Additional reinforcement provides the bucket with more capacity for larger loads. The bucket also features a radiused inside for easy cleanout.

#### No Wear to Be Found

Side and bottom skid plates help resist wear.

#### Increased Capacity

Additional reinforcement provides the bucket with more capacity for larger loads.

#### Easy Empty

Cleanout is simple with the bucket's radiused design.

PART NUMBER	OUTSIDE WIDTH	CUBIC YARD	CUTTING EDGE	WEIGHT

# GRAPPLE BUCKET

The Skid Steer Grapple Bucket functions the same as Arrow Skid Steer Buckets with the addition of grapple arms. The Grapple Bucket is great for moving scrap, logs, lumber, and bulky materials. Individual 3,000 PSI hydraulic cylinders power two 0.75 in steel grapple arms. The four bottom skid plates and two reinforced side plates provide added durability. Additionally, the low-profile design allows for increased visibility while the 42 inches of height increases capacity.

AND PRICING**

## Built to Last

Two 2 in 3,000 PSI heavy-duty cylinders with cylinder guards ensure long-term use without damaging cylinders.

## Heavy-Duty Durability

Grapple arm hinge points use self-lubricating bronze bushings.

## See More, Be Safe

Low-profile design allows for increased visibility without sacrificing capacity.

## FORK MOUNTED BUCKET

The heavy-duty Fork Mounted Bucket is perfect for quick small jobs. Just mount the bucket directly to your pre-existing forks. Telehandler operators love this bucket's ability to quickly collect materials from high, hard-to-reach places. Additionally, the reinforced construction adds to the bucket's durability and extends its service life.

## Fork Mountable

Slide the bucket directly onto your preexisting forks and pin behind forks to secure bucket in place.
